With over eleven years' experience in software development, my work includes everything from simple Console/Windows Forms applications to large systems for process control, institutional systems, integration with ERP systems, Windows Forms, ASP.NET, Windows Mobile, Xamarin Apps, .NET Core, WebAPIs.

I take a critical look and see if the project's premises and objectives are consistent, if the choices made will not have undesirable side effects and if there are more efficient. I consider it essential to be committed to quality and delivery time, always devoting all my effort to the companies for which I work. All this, of course, maintaining professional and ethical conduct.

Programming Languages and Applications

Languages: Asp.Net, C#, VB, VBA, SQL, JavaScript, Jquery, HTML, CSS, GoLang
